### Pawz Dog Boots Helpful Info

PAWZ boots are disposable and reusable. When one wears out, you simply toss it.

Will my dog accept them?

Your dog WILL WEAR PAWZ boots. Whether it's because there are no zippers or straps, or because there is no padding, dogs accept wearing PAWZ dog boots even when they won't wear other brands. Feeling the ground through the boot is what gives your dog that needed sense of security.

Will PAWZ stay on?

PAWZ boots stays on.

Are PAWZ waterproof or just water-resistant?

PAWZ are waterproof. No other boot protects against liquid chloride and other liquid hazards.

Will my dog be comfortable?

Like a sock, PAWZ moves with your dog, allowing for full paw motion and maximum comfort. Without padding or sole, PAWZ allows your dog to feel the ground, providing the needed sense of security not possible with a typical dog boot. This is the main reason why dogs that won't wear dog boots WILL WEAR PAWZ.

What does PAWZ protect against?

Ice, Lawn Chemicals, Salt, Liquid Chloride, Snow, Fire Ants, Pool Liner Tears, Mud, Clay, Pad Rashes, Post-Surgical Infection, Post-Grooming Dirt, Hot Pavement, and solves traction control problems.

Are PAWZ about fashion or function?

While they are very fashionable, PAWZ was designed to be functional. Form follows function to create serious paw protection for your dog. These are protective boots not a fashion accessory. Made of natural rubber, PAWZ boots are biodegradable. And being environmentally green is always fashionable.

### **Message from Pawz for IVDD dogs**

**To ensure the proper fit, please measure the dogs paw from the back of the heel to the longest toenail.**

**Because the boots are waterproof (great for keeping the elements out, the boots do not breathe). The boots in human terms have the same properties that a swim cap would have. To help with indoor use here are a couple of tips. To help make the boot less constricting for indoor use, I would recommend that you carefully cut the roll off the top of the boot. The boot will stay on. I would recommend using a hole punch to actually punch holes in the boots so any moisture that should build up will evaporate. Please make sure to monitor your pet and to remove the boots frequently to make sure your pooch is comfortable. Each dog has their own tolerance level so it will be important to find your dog's threshold. Because our boots have no straps or Velcro the dog can feel the ground and have a sense of security."**
