ABOUT WIGGLELESS

[The Story behind WiggleLess](#)

When Lisa Luckenbach's pups June and Henry injured their backs playing and were in massive pain, Lisa searched the marketplace for canine back support but found nothing.

As a yoga teacher, Lisa knows how important a healthy spine is to longevity and the quality of life. It occurred to Lisa that if a back wrap could help humans, one could help June and Henry, too.

Lisa drew up a pattern and had it sewn up. It wasn't long before June, the most recently injured, was reaping the rewards of wearing her new back brace. Not only did the brace provide back pain relief to June with her IVDD (intervertebral disc disease) related injury, but it helped prevent her from re-injuring her back.

Lisa with Henry & June

WiggleLess™ is designed to support and prevent back injury in small and medium size dogs. The WiggleLess™ patented, vet recommended wrap restricts sudden twists to the spine that may lead to back pain or trauma and provides firm, comfortable support helping to reduce stress.

BENEFITS OF WIGGLELESS

WiggleLess has been found to offer some pups even more than prevention and support for back problems.

Stress & Anxiety Reducer:

WiggleLess™ may be worn to assist with reducing stress. We have found the wrap style of WiggleLess™ over the spine may calm and comfort your dog much like swaddling a baby – offering a feeling of confidence and security.

Helping Skin Heal:

WiggleLess™ may also be worn as a barrier to skin irritations, infections or hot spots on the back of your dog and/or around the torso. If your vet has prescribed medications for the skin, a WiggleLess™ may provide additional support in the process of healing.

In Place of Cones:

Depending on the situation WiggleLess™ may be worn in place of a cone. WiggleLess™ prevents dogs from licking, scratching, and/or biting their tails and allows medication to work beautifully. Pups are much more comfortable than wearing an awkward cone!

What Veterinarians and Customers are Saying about WiggleLess

"I can't even begin to thank you enough. My 6 year old rat terrier, Sophie, was diagnosed with a bulging disk and required surgery that cost \$4000 or more that we just didn't have. She was restricted to her crate for at least 4-6 weeks in hopes that she would heal on her own with the limited movement. It was very touch and go for a long time. She'd have good days and bad days when her rear end would go out from under her.

Sadly, it was rapidly approaching the point where I'd have to make a decision. I asked my vet if there wasn't some sort of doggie back brace that could help keep her immobilized. She didn't know of anything. That night I started searching the internet. That's when I found your site. Because of the spinal immobilization her back was able to heal. I don't think I'll ever take it off of her. It's just such a wonderful support for our swaybacked loved ones.

You've given my girl back to me. If I hadn't found you, I know I would've had to say goodbye to her. You are a God send, Sophie's miracle and our angel. There's no doubt about it...you saved her life. I am forever indebted to you. I post on my FaceBook page about you, I tell my clients about you (I own a pet sitting business) and am going back to our vet to show her the change in Sophie compared to the last time she saw her.

- Chris and Lori, Sophie's parents

"In my 15 years as an Animal Health Technician I have encountered many dogs prone to spinal injuries and back pain. I recommend WiggleLess™ for my animal patients who suffer from back pain of any sort. This bracing system can help any pet with back pain by helping support the spine during recovery from injury or surgery as well as preventing the need for surgery."

- Dr. D'Anira Wiseman B.S., D.C., A.H.T.

What Veterinarians and Customers are Saying about WiggleLess

I have over 35 years in the Chiropractic profession. We have long had support devices for the human spine and condition. The WiggleLess™ device for our pet companions is the first support system I know of that not only can be used to prevent injuries, it provides comfort to those dog breeds prone to neuro-spinal abnormalities by stabilizing the spine and disc components and restricting over-extended range of motion. The WiggleLess™ device really works!

- *Dr. J. Chappell, D.C., N.D., Ph.D., M.H.*

“My one and a half year old bichon/poodle mix, Coconut, was rescued off the streets of L.A. She was starving (she weighed 8 pounds and should have been 12), matted, dirty and scared. After having her only a few days, I realized she was in pain and immediately took her to the vet. X-rays revealed nothing broken, but we did not know her history. Had she been hit by a car or had she been kicked and abused? The vet gave her medicine and told me to keep her as calm as possible even going as far to say I may want to keep her in a crate for several weeks so her back could rest. The thought of leaving her crated day and night broke my heart, but once she was feeling better, it was hard to keep her down. I was very worried she would re-injure herself. It was at this point, I found WiggleLess™ back support. She wore a WiggleLess™ and was able to walk freely, even run and play, but WiggleLess™ provided support and gentle restraint so she was not able to leap and twist, possibly re-injuring herself. I am happy to report that since finding WiggleLess™ back support, Coconut, my sweet little dog, is playful, happy, and pain free.”

- *Barbara, Coconut's mom*

What Veterinarians and Customers are Saying about WiggleLess

“WiggleLess™ helps to stabilize the spinal column and restricts unwanted movements that may exacerbate underlying spinal injuries.”

-Robert Fryer, DVM Animal Clinic of Oak View

“I am impressed that you care for dogs as much as you do. Most people are interested in the money more than the product but you are the opposite! You were more interested in making my dog feel better! Snickers is 14 and has kidney disease and she is losing her sight in her left eye and now with her back problems, I feel I have to make my Furry Doghter (daughter) as comfortable as I can until I have to put her to sleep. I hope to have a long time left with her. She can learn to get around with only one eye and her back will heal. Her kidney disease is under control with diet and exercise. She has not been able to take walks for a week and a half and today I took her for her first walk since she hurt her back. She was so happy to go back out! Thank you, thank you, thank you!”

- Theresa, Snickers mom

“Since her spinal surgery, Vienna has recovered by about 85%. She still has a little hitch in her get along, but it doesn't slow her down one bit. She has no idea that her spine has been compromised and runs and plays and chases squirrels every day! She is such an active dog that I worry she'll over do it. What can you do!? I'll tell you what you can do...get a Wiggless! I feel so much better knowing that she has some extra support while she's playing like a crazy Weenie dog. I sometimes refer to the Wiggless as my “Worry-less”. It makes us BOTH feel better!”

- Laurie, Vienna's mom

DESIGN

WiggleLess™ is designed to provide back pain relief to dogs and to help prevent dog back injuries in small and medium size breeds prone to IVDD and other canine back problems.*

Our patented Wiggleless™ dog back problem and pain-relief product features:

Built-in steel boning, which restricts sudden twists to a dog's back that may lead to back pain or back injury.

- Durable, lightweight, breathable material for comfort and long-lasting use.
- An integrated leash "O" ring for convenience when taking your dog for a walk.
- An easy to use owner and dog-friendly wrap style that provides both comfort and firm support assisting stress reduction.

*Dogs prone to back problems are often classified as chondrodystrophic breeds, which include, but are not limited to: **Dachshund, Beagle, Shih Tzu, Bulldog, Pug, Bassett Hound, Miniature Poodle, Miniature Schnauzer, Pekingese, American Cocker Spaniel, Lhasa Apso, Corgi and Scottish Terrier.**

WiggleLess™ has been designed to provide your dog with comfort and support, which provides you with peace of mind.
